

## SUMMER WEIGHT SIZE CHART

**Note: Print This Document**

***Do Not Place Hand on Monitor for Fitting***

Most people have a fair idea of their hand size from purchasing other gloves over the years. If you have an idea that you use an X large for instance, however you know that you have a large muscular hand, then go up a half size based on that experience. If you know that an x Large is usually a little big because you have a smaller hand structure, then go down 1/2 size.

Below is a sizing chart, if it measures 4 7/8 inches from A to B then the chart should get you very close. You must still use your judgement based on your experience and knowledge of your own hands.

*Note: The attached chart is for **SUMMER** weight gloves. When ordering **STANDARD** weight gloves **ADD 1/2** size to the Summer Size. When ordering **WINTER** weight gloves **ADD 1 FULL** size to the Summer Size.*
